

Acceptance Testing Sounds Easy, But Is Hard To Get Right – Meetup Recording

Here is the recording from the 7 April 2022.

Screen sharing starts at [6:40](#) after the warm up questions...

Interesting points in the video:

- At [16:24](#) we think about:
 - **Why do we need to write “Developer Tests”?**
 - **Why is there not a subject matter expert that cares about this technical component/part?**
- At [31:10](#) Urs explains his reasons for “Acceptance Tests Green ASAP”
→ Extract module/class/function and write test around that later.
- At [34:58](#) “Can you rely only on Acceptance Tests” and Urs has an example from his product they are building.
- At [36:44](#) Tip: Raise the abstraction level so that the tests are understandable and readable and interesting to non software people (Subject Matter Experts)
- At [42:15](#) we dive into the different prepared test samples
- At [44:40](#) we review the test from Urs
- At [57:55](#) we look at the “Good Acceptance Tests Checklist”
Thanks [Dave Farley](#)
[Check out Dave’s Youtube Channel](#)
- At [59:00](#) “Paolo should review all tests” not “Paolo should review all code” (which is not possible) @Urs Enzler
- At [1:00:20](#) we discuss 5 points “What does Acceptance Testing make possible” with an example
- At [1:04:00](#) “Where should we poke the system with Acceptance Tests?”
- At [1:25:30](#) Experience Exchange with the experts in the room
